# **Ezi-SERVO**® II CC-Link

**Closed Loop Stepping System**

## 1 CC-Link Based Motion Control

Ezi-SERVOII CC-Link is a stepping motor control system that supports CC-Link with high speed fieldbus (max, 10Mbps).

Ezi-SERVOII CC-Link is a remote device module supporting CC-Link network. Multi-function control is possible by occupying 1 station and 2 stations in CC-Link and motion and monitoring functions are processed by device commands.

- ※ Maximum number of axes able to be connected
  - 1 station : 42 axes
  - 2 station : 32 axes

## 2 Closed Loop System

Ezi-SERVOII is an innovative Closed Loop System that utilizes a high-resolution motor mounted encoder constantly to monitor the current position. The encoder feedback allows the Ezi-SERVOII to update the current position every 50  $\mu$ sec. It allows the Ezi-SERVOII drive to compensate for the loss of position, ensuring accurate positioning. For example, due to a sudden load change, a conventional stepper motor and drive could lose a step but Ezi-SERVOII automatically correct the position by encoder feedback.

## 3 No Gain Tuning

To ensure machine performance, smoothness, positional error and low servo noise, conventional servo systems require the adjustment of its servo's gains as an initial crucial step. Even systems that employ auto-tuning require manual tuning after the system is installed, especially if more than one axis are interdependent. Ezi-SERVOII employs the best characteristics of stepper, closed loop motion controls and algorithms to eliminate the need of tedious gain tuning required for conventional closed loop servo systems. This means that Ezi-SERVOII is optimized for the application and ready to work right out of the box. The Ezi-SERVOII system employs the unique characteristics of the closed loop stepping motor control, eliminating these cumbersome steps and giving the engineer a high performance servo system without wasting setup time. Ezi-SERVOII is especially well suited for low stiffness loads (for example, a belt and pulley system) that sometime require conventional servo systems to inertia match with the additional expensive and bulky gearbox. Ezi-SERVOII also performs exceptionally, even under heavy loads and high speeds.

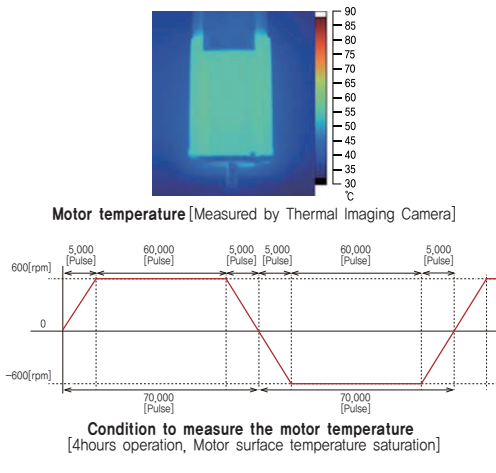

## 4 Heat Reduction / Energy Saving

(Motor Current Control according to load)

Ezi-SERVOII automatically controls motor current according to load.

Ezi-SERVOII reduces motor current when motor load is low and increases motor current when load is high. By optimizing the motor current, motor heat can be minimized and energy can be saved.

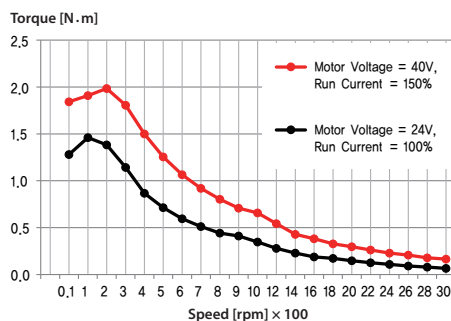

## 5 Torque Improvement

(Motor Voltage Increasing and Motor Current Setting)

Ezi-SERVOII boosts the voltage supplied to the motor by internal DC-DC Converter. The torque at the high speed is increased. In addition, it is possible to set the Run Current up to 150%, whereby the torque at low speed is increased.

Torque can be improved by about 30% over the entire speed range.

※ The torque at low speed and high speed is improved about 30%.

Measured Condition : Drive = Ezi-SERVOII-CL-56L  
Motor Voltage = 40VDC  
Input Voltage = 24VDC

## 6 No Hunting

Traditional servo motor drives overshoot their position and try to correct by overshooting the opposite direction, especially in high gain applications. This is called null hunt and is especially prevalent in systems that the break away or static friction is significantly higher than the running friction. The cure is lowering the gain, which affects accuracy or using Ezi-SERVOII Motion Control System. Ezi-SERVOII utilizes the unique characteristics of stepping motors and locks itself into the desired target position, eliminating Null Hunt. This feature is especially useful in applications such as nanotech manufacturing, semiconductor fabrication, vision systems and ink jet printing in which system oscillation and vibration could be a problem.

## 7 Smooth and Accurate

Ezi-SERVOII is a high-precision servo drive, using a high-resolution encoder with 20,000 pulses/revolution. Unlike a conventional Microstep drive, the on-board high performance MCU (Micro Controller Unit) performs vector control and filtering, producing a smooth rotational control with minimum ripples.

## 8 Fast Response

Similar to conventional stepping motors, Ezi-SERVO II instantly synchronizes with command pulses providing fast positional response. Ezi-SERVO II is the optimum choice when zero-speed stability and rapid motions within a short distance are required. Traditional servo motor systems have a natural delay called settling time between the command input signals and the resultant motion because of the constant monitoring of the current position.

## 10 High Torque

Compared with common step motors and drives, Ezi-SERVO II motion control systems can maintain a high torque state over relatively long period of time. This means that Ezi-SERVO II continuously operates without loss of position under 100% of the load. Unlike conventional Microstep drives, Ezi-SERVO II exploits continuous high torque operation during high speed motion due to its innovative optimum current phase control.

## 9 High Resolution

The unit of the position command can be divided precisely. (Max. 20,000 pulses/revolution)

## 11 High Speed

The Ezi-SERVO II operates well at high speed without the loss of synchronism or positioning error. Ezi-SERVO II's ability of continuous current position monitoring of enables the stepping motor to generate high torque, even under a 100% load condition.

## Advantages over Open-Loop Control Stepping Drive

1. Reliable positioning without loss of synchronism.
2. Holding stable position and automatically recovering to the original position even after experiencing positioning error due to external forces, such as mechanical vibration or vertical positional holding.
3. Ezi-SERVO II utilizes 100% of the full range of rated motor torque, contrary to a conventional open-loop stepping driver that can use up to 50% of the rated motor torque due to the loss of synchronism.
4. Capability to operate at high speed due to load-dependant current control, open-loop stepping drivers use a constant current control at all speed ranges without considering load variations.

## Advantages over Servo Motor Controller

1. No gain tuning. (Automatic gain adjustment in response to a load change)
2. Maintains the stable holding position without oscillation after completion of positioning.
3. Fast positioning due to the independent control by on-board MCU.
4. Continuous operation during rapid short-stroke movement due to instantaneous positioning.

# ● Features of Motion Controller

## 1. Loop Count

This function allows positioning repeatedly according to the Loop Count Number.

## 2. Acceleration/Deceleration

For quick acceleration and gradual deceleration, you can set each acceleration and deceleration time separately.

## 3. Pause

You can pause the motion upon the input of an external signal. When Pause signal change to OFF, the motor will restart to original target position.

## 4. Alarm

The number of LED flashing time and information displayed on the 7-Segment indicates which Alarm has occurred.

## 5. Teaching

Teaching signal is used to memorize current Position data into the selected Position Table item.

## 6. Jump

Within one Position Table, you can select various Position Table numbers that you want to jump. With three external input signal during movement, the next jump Position Table number can be select.

◆ Position Table #14	Position	---	Next	---	Input 1	Input 2	Input 3	---
	10000		100		115	116	117

## Description of Specification Items

- ① **Maximum Holding Torque** This is the maximum torque that can be exerted through the gearbox when the motor is stopped. (Based on 100% of stop current) Use below the maximum torque of the gearbox.
- ② **Rotor Inertia Moment** It is the value of the moment of inertia of the motor.
- ③ **Backlash** It is the gap between the gear and the gear, and it is the angle at which the gearbox shaft moves without external force when stopped.
- ④ **Angle Transmission Error** This is the transmission characteristic of the gearbox, which means the difference between the theoretical rotation angle and the actual rotation angle of the output shaft.
- ⑤ **Reduction Gear Ratio** It is the value obtained by dividing the number of output rotation by the number of input rotation.
- ⑥ **Resolution(10,000[ppr] Standard)** This is the angle at which the gearbox output shaft moves when the motor is driven by 1 pulse.
- ⑦ **Permissible Torque** This value is a torque value at which the life of the motor becomes 20,000 hours when the input rotation speed is 3,000rpm. It refers to the permissible continuous torque.
- ⑧ **Maximum Torque** This is the maximum torque allowed during acceleration/deceleration.
- ⑨ **Permitted Speed Range** It is the range of rotation speed based on the output shaft of the gearbox.
- ⑩ **Unit Weight** It is the sum of the weight of the gearbox and the motor.

## ● Specifications of Motor with Gearbox

# 42mm

## ● Settings and Operation

### ◆ 86mm Motor Drive (EzS2-CL-86 series)

## 1. Drive Status LED

Indication	Color	Function	ON/OFF Condition
PWR	Green	Power Input Indication	LED is turned ON when power is applied
INP	Yellow	Complete Positioning Motion	Lights On when Positioning error reaches within the preset pulse selected by parameter
SON	Orange	Servo On / Off Indication	Servo On: Lights On, Servo Off: Lights Off
ALM	Red	Alarm indication	Flash when protection function is activated

### ◆ Protection functions and LED flash times

Times	Error Code <sup>*4</sup>	Protection	Conditions
1	E-□01	Over Current Error	The current through power devices in inverter exceeds the limit value <sup>*1</sup>
2	E-□02	Over Speed Error	Motor speed exceeds 3,000 [rpm]
3	E-□03	Position Tracking Error	Position error value is higher than 180° in motor run state <sup>*2</sup>
4	E-□04	Over Load Error	The motor is continuously operated more than 5 seconds under a load exceeding the max. torque
5	E-□05	Over Temperature Error	Temperature of inside of drive exceed 85°C
6	E-□06	Over Regenerated Voltage Error	Back-EMF is higher than limit value <sup>*3</sup>
7	E-□07	Motor Connect Error	The power is ON without connection of the motor cable to drive
8	E-□08	Encoder Connect Error	Cable connection error in Encoder connection of drive
10	E-□0A	In-Position Error	After operation is finished, a position error occurs
12	E-□0C	ROM Error	Error occurs in parameter storage device(ROM)
15	E-□0F	Position Overflow Error	Position error value is higher than 180° in motor stop state <sup>*2</sup>

\*1 : Limit value depends on motor model, (Refer to the Manual)

\*2 : Default value can be changed by parameter, (Refer to the Manual)

\*3 : Voltage limit of Back-EMP depends on motor model, (Refer to the Manual)

\*4 : When an alarm occurs, error code is displayed on the 7-segment instead of CC-Link ID.

※ Please refer to the Manual for the details of protection functions.

※ □ is the CC-Link error code.

Alarm LED flash  
(Ex, Position tracking error)

## 2. CC-Link Status LED

Name	Color	Status	Function	Explanation
L.RUN	Green	Off	Power Off	Checking the power status.
		On	No network connection	Checking the status of the network cable and Master controller.
L.ERR	Red	On	Normal operation	CC-Link network connection is normal status.
		Off	Normal operation	No error occurred
		On	Critical error	Communication process fails.
		Flashing	Communication error	Error occurred in the CC-Link network, Check the 7-segment display information and process it.
RD	Orange	Off	CRC error, Network cable error	There is a contact error of the network connector or noise in the cable line. To Check the terminating resistor attachment status, network wiring and the grounding status of the frame.
		Random flashing		
SD	Yellow	Off	No Data receiving	
		On	Data receiving	
L.ERR	Yellow	Off	No Data transmitting	
		On	Data transmitting	

### ◆ CC-Link network status 7-segment display information

Error Code	Description
E-0□□.	Normal CC-Link network status
E-1□□.	CC-Link station number switch setting is incorrect
E-2□□.	CC-Link mode switch setting is incorrect
E-3□□.	CC-Link station number switch setting is changed
E-4□□.	CC-Link mode switch setting is changed
E-5□□.	CRC error occurs in CC-Link communication
E-6□□.	Timeout occurs during communication with master
E-7□□.	Communication with master is disconnected
E-8□□.	CC-Link Processor Error 1
E-9□□.	CC-Link Processor Error 2
E-A□□.	Data link error
E-B□□.	Remote I/O error
E-C□□.	Remote register error

※ □□ is the drive error code.

### 3. CC-Link Station Display and Setting Switch(SW2, SW3)

There are two Rotary switch to set value of CC-Link station No. Switch on the right side(X1) indicates the one's(1) digit and Switch on the left side(X10) indicates ten's(10) digit.

※ Default setting is '00'

### 4. CC-Link Communication Speed Setting Switch(SW4)

This is a switch to set communication speed of CC-Link. (The case of the product is marked with 'MODE'.)

MODE	CC-Link Baud Rate
0	156 kbps <sup>*1</sup>
1	625 kbps
2	2.5 Mbps
3	5 Mbps
4	10 Mbps
5	NONE
6	NONE
7	NONE
8	NONE
9	NONE

\*1 : Defaule = 156kbps

### 5. CC-Link Station Setting Switch(SW1)

Ezi-SERVOII CC-Link provides various functions depending on the station occupancy. Select the station occupancy with Dip-switch(SW1).

SW1,1	SW1,2	Occupation
OFF	OFF	1 station occupation <sup>*1</sup>
ON	OFF	2 station occupation

\*1 : Defaule = '1 station occupation'

## 6. Input/Output Signal Connector(CN1)

NO.	Function	I/O
1	LIMIT+	Input
2	LIMIT-	Input
3	ORIGIN	Input
4	Digital In1	Input
5	Digital In2	Input
6	Digital In3	Input
7	Digital In4	Input
8	Digital In5	Input
9	Digital In6	Input
10	Digital In7	Input
11	Digital Out1	Output
12	Digital Out2	Output
13	Digital Out3	Output
14	Digital Out4	Output
15	Digital Out5	Output
16	Digital Out6	Output
17	BRAKE+	Output
18	BRAKE-	Output
19	EXT_GND	Input
20	EXT_24VDC	Input

## 7. Encoder Connector(CN2)

NO.	Function	I/O
1	A+	Input
2	A-	Input
3	B+	Input
4	B-	Input
5	Z+	Input
6	Z-	Input
7	5VDC	Output
8	GND	Output
9	F.GND	----
10	F.GND	----

## 8. Motor Connector(CN3)

NO.	Function	I/O
1	A Phase	Output
2	B Phase	Output
3	/A Phase	Output
4	/B Phase	Output

NO.	Function	I/O
1	/B Phase	Output
2	B Phase	Output
3	/A Phase	Output
4	A Phase	Output

※ 86mm motor drive.

## 9. Power Connector(CN4)

NO.	Function	I/O
1	24VDC	Input
2	GND	Input

NO.	Function	I/O
1	GND	Input
2	40~70VDC	Input

※ 86mm motor drive.

## 10. CC-Link Communication Connector(CN5)

NO.	Function
1	DA
2	DB
3	DG
4	SLD
5	F.GND

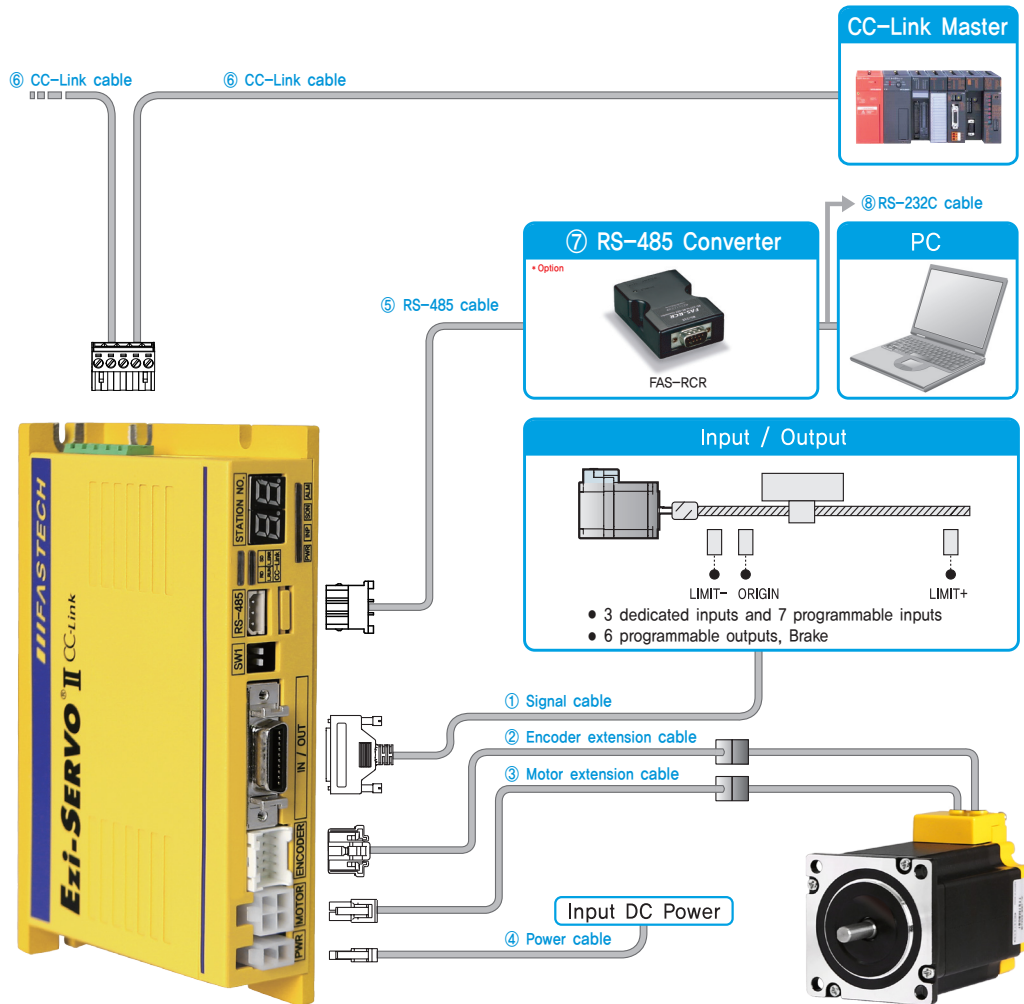

## 11. RS-485 Communication Connector(CN6)

NO.	Function
1	Data+
2	Data-
3	GND

# System Configuration

Type	Signal Cable	Encoder Cable	Motor Cable	Power Cable	CC-Link Cable	RS-485 Cable
Length supplied	—	30cm	30cm	—	—	—
Max. Length	20m	20m	20m	2m	100m	2m

## 1. Options

### ① Signal Cable

Available to connect between Input/Output signals and Ezi-SERVO II CC-Link,

Item	Length [m]	Remark
CSVN-S-□□□F	□□□	Normal Cable
CSVN-S-□□□M	□□□	Robot Cable

□ is for Cable Length. The unit is 1m and Max, 20m length.

### ② Encoder Extension Cable

Available to extended connection between Encoder and Ezi-SERVO II CC-Link,

Item	Length [m]	Remark
CSVO-E-□□□F	□□□	Normal Cable
CSVO-E-□□□M	□□□	Robot Cable

□ is for Cable Length. The unit is 1m and Max, 20m length.

### ③ Motor Extension Cable

Available to extended connection between motor and Ezi-SERVO II CC-Link,

Item	Length [m]	Remark
CSVO-M-□□□F	□□□	Normal Cable
CSVO-M-□□□M	□□□	Robot Cable

□ is for Cable Length. The unit is 1m and Max, 20m length.

### ④ Power Cable

Available to connect between Power and Ezi-SERVO II CC-Link,

Item	Length [m]	Remark
CSVO-P-□□□F	□□□	Normal Cable
CSVO-P-□□□M	□□□	Robot Cable

□ is for Cable Length. The unit is 1m and Max, 2m length.

### ⑤ RS-485 Cable

Ezi-SERVO II CC-Link RS-485 network.

Item	Length [m]	Remark
CGNR-RT-□□□F	□□□	Normal Cable

□ is for Cable Length, The unit is 1m and Max. 2m length.

### ⑥ CC-Link Network Cable

It is a cable to connect Ezi-SERVO II CC-Link to CC-Link network.

\* This cable is not provided and it is recommended to use the cable specified by CC-Link Association.

### ⑦ FAS-RCR(RS-232C to RS-485 Converter)

Item	Specification
Comm. Speed	Max. 115,2 [kbps]
Comm. Distance	RS-232C: Max. 15m RS-485: Max. 1,2km
Connection Type	RS-232C: DB9 Female RS-485: RJ-45
Dimension	50×75×23mm
Weight	38g
Power	Powered from PC (Usable for external DC5~24V)

### ⑧ RS-232C Cable

Available to connect between RS-232C port of master and FAS-RCR.

Item	Length [m]	Remark
CGNR-C-002F	2	Normal Cable
CGNR-C-003F	3	
CGNR-C-005F	5	

### ⑨ TB-Plus(Interface Board)

Available to connect more conveniently between Input/Output signal and Ezi-SERVO II CC-Link.

### ⑩ Interface Cable

Available to Connect between TB-Plus Interface Board and Ezi-SERVO II CC-Link.

Item	Length [m]	Remark
CIFN-S-□□□F	□□□	Normal Cable
CIFN-S-□□□M	□□□	Robot Cable

□ is for Cable Length, The unit is 1m and Max. 20m length.

## 2. Connector Specifications

Connector specifications for cabling to drive.

Purpose	Item	Part Number	Manufacturer
Power (CN4)	Housing Terminal	5557-02R 5556T	MOLEX
Motor	Drive Side (CN3)	Housing Terminal 5557-04R 5556T	MOLEX
	Motor Side	Housing Terminal 5557-04R 5556T	MOLEX
Encoder	Drive Side (CN2)	Housing Terminal 51353-1000 56134-9000	MOLEX
	Encoder Side	Housing Terminal SMP-09V-NC SHF-001T-0,8BS	JST
Signal (CN1)	Connector Backshell	10120-3000PE 10320-52A0-008	3M
CC-Link Communication (CN5)	Terminal Block	AK950-5	PTR
RS-485 Communication (CN6)	Housing Terminal	5264-03 5263PBT	MOLEX

※ Above Connector is the most suitable product for the drive applied. Another equivalent Connector can be used.
