HEXAR is a leader in the wearable exoskeleton robot technology

Resilion U30A

Integrated active rehabilitation training equipment for recovering of shoulder joint movements, muscular strength measurement and muscle reconstruction

Resilion U30A

Product Overview

Integrated active rehabilitation training equipment for recovering of shoulder joint movements, muscular strength measurement and muscle reconstruction

Main Function

- Upper extremity isokinetic rehabilitation training with ergonomic structure applied with wearable robot technology
- Multimodal comprising of Isokinetic, Isotonic, Isometric, CPM functions
- ROM measurement and isokinetic motion test
- Expandable to cognitive neuro rehabilitation device with games
- Easy left/right switching
- User registration, exercise data history management and print out

Specification

Purpose of Use	Integrated multimodal rehabilitation training for restoring upper limb movements and enhancing muscle strength				
Voltage	100-240V				
Frequency	50/60Hz				
Max. Power Consumption	1,200VA				
Dimension	892mm (W) x 1350mm (D) x 1650mm (H)				
Weight	127.5Kg				
Range of Motion (ROM)	Ext / Flex 0° ~ 150°	Abd / Add 0° ~ 150°	Horizontal Abd / Add -10° ~ 110°	Int / Ext Rotation -90° ~ 90°	Elbow Ext / Flex 0° ~ 150°
Exercise Mode	CPM / Isokinetic / Isotonic / Isometric				
Degree of Freedom (DOF)	4 DOF
